

Foods and Nutrition: Quick Bread vs. Yeast Bread

Bakers appreciate the aroma and creativity behind a yeast dough masterpiece. Yeast breads require time and patience in allowing the dough to proof and rise before baking. A fast-paced modern society found solutions to bake quick breads using food-safe chemical leavening agents such as baking soda and baking powder, eliminating the wait and fermentation time before baking. Quick breads also eliminated the kneading process, a step to develop the gluten to allow yeast bread dough to stretch and rise. As one of the world's oldest foods, yeast breads and quick breads come in various types, shapes, sizes, and textures.

Inspire Kids to Do

Skill Building

When baking bread, begin with a quick bread recipe using food-safe chemical leavening agents, then a biscuit recipe, and finally a yeast bread that requires properly proofing yeast and kneading the dough. It is important to be aware of the differences between a quick bread and a yeast bread and the time required to prepare each.

Goals

- Check for doneness of a bread.
- Properly proof yeast.
- Share what I have learned with others.

Project Ideas

- Try quick bread recipes using a variety of fruits and nuts.
- Experiment with butter and shortening in biscuits.
- Bake yeast bread using a sweet bread recipe such as cinnamon rolls.

Self-Evaluation Before

Using the rating scale below, answer the following:

- 1 = not at all
- 2 = a little
- 3 = a lot

I know how to...

- Test for doneness in a quick bread 1 - 2 - 3
- Proof yeast 1 - 2 - 3
- Tell the difference between yeast bread and quick bread 1 - 2 - 3

Bread Baking Basics

When are Baked Goods Done?

In baking, there are many visual clues to test if a product is done. This includes lightly touching a cake surface, golden brown color on breads, or inserting a toothpick in a quick bread to see if it is still sticky.

Another way to test for doneness is by checking the internal temperature using a food thermometer. By practicing a recipe, you can determine with temperature how long it takes to bake a product. Then, make note of that time in the recipe for future reference.

It is still important to use visual clues to determine if a product is done.

Suggested Temperatures for Doneness

Layer cakes — 205° to 210° F

Quick bread — 210° F

Pound cake — 210° F

Yeast bread — 195° to 210° F

Jelly roll cakes — 190° to 195° F

Bundt cake — 212° F

Muffins — 210° F

Yeast rolls — 190° to 195° F

Yeast

Yeast is a living microorganism in the fungi family. Starch, carbohydrates, and sugar feed the yeast. As it feeds, yeast digests carbohydrates and kickstarts fermentation, releasing carbon dioxide that expands gluten proteins and causes dough to expand and rise. Yeast feeds and reproduces best between 70° and 80°. Salt counteracts yeast. Never let salt come in direct contact with yeast. Yeast gives bread its distinctive flavor.

Temperature for Yeast

Yeast can thrive in the right warm temperature or be dormant or “killed” in the wrong temperature. For best results, follow the temperature recommendations for the type of yeast used in your recipe. The ideal temperature for active dry yeast is 100° to 110° F. The ideal temperature for instant (also called fast rising) and bread machine yeast is 120° to 130° F.

Packet and Jar Equivalent

1 Packet of Yeast = 2 ¼ teaspoons

2 Packets of Yeast = 4 ½ teaspoons

3 Packets of Yeast = 6 ¾ teaspoons

Types of Yeast

Dry Active — activated in warm water

Instant or RapidRise® — added directly to recipe

Applesauce Muffins

Make this batter now -- bake later!

Tools Needed

- Muffin tin
- Electric mixer
- Mixing bowl
- Measuring cups
- Measuring spoons
- Knife
- Rubber spatula
- Spoon
- Hot pad
- Cutting board

Ingredients

- | | |
|-----------------------|------------------------|
| ¼ cup margarine | 1 teaspoon baking soda |
| 1 cup sugar | ¼ teaspoon salt |
| 1 egg | 2 cups flour |
| 1½ teaspoons cinnamon | 1¼ cups applesauce |

Photo by Mink Mingle on Unsplash

Directions

Remember to wash your hands!

1. Preheat oven to 350 degrees. Line muffin tin with paper baking cups or grease bottom of muffin tin with margarine or cooking spray.
2. Cream margarine and sugar with an electric mixer. Add egg, mixing well. Blend in remaining ingredients.
3. Fill muffin tins 2/3 full and bake for 15 to 18 minutes. Optional: Add 1/2 cup of diced apple or raisins to batter.

Helpful Hints

- While an electric mixer makes mixing these muffins a quick task, they will turn out best if mixed by hand. Either way — by hand, or by mixer — it is important to remember that muffins are a “quick bread” and that means muffins or coffeecakes will come out best if not overmixed.
- Just lightly stir the ingredients together — so dry ingredients are barely moistened. The batter will still be slightly lumpy, and that’s fine.
- Overstirring or mixing a quick bread will make the muffins tough. Sometimes kids who help in the kitchen really like to stir big and long — and there are good recipes for that — but when it comes to mixing muffins, less is more!

Safety Tip #1: Before children use an electric mixer, it is important that they are shown how to use it safely. Be sure they know how to safely plug in and unplug an electric appliance and that they can operate the mixer’s control switch. It may take practice for a child to be able to scrape a mixing bowl with a rubber spatula and use the electric mixer. Encourage them to stop the mixer and scrape the bowl, then restart the mixer.

Safety Tip #2: Remember, this recipe and most batters contain raw egg. Don’t lick the spoon or bowl, because the raw egg can make us sick — especially young children. Wait until the batter is baked; it’s then safe to go ahead and enjoy!

Mountaintop Biscuits

Kansas Wheat Commission Test Kitchen Note

A simple recipe that can be prepared in short order, and they're a mile high!

Prep Time: 35 minutes

Bake Time: 12 minutes

Yield: 12, 2½-inch biscuits

Ingredients

- 3 cups all-purpose flour
- 2 tablespoons granulated sugar
- 4½ teaspoons baking powder
- ¾ teaspoon cream of tartar
- ¾ teaspoon salt
- ¾ cup vegetable shortening
- 1 beaten egg
- 1 cup low-fat milk

Instructions

1. Preheat oven to 450° F.
2. Stir flour so it is not packed from being in container. Measure dry ingredients and level off. Sift flour with sugar, baking powder, cream of tartar, and salt into medium bowl.
3. Cut in shortening, with pastry blender or 2 knives (used scissors-fashion), until mixture resembles coarse meal.
4. Combine egg and milk, and add to flour mixture all at once. Stir with fork just long enough to make a soft dough that forms a ball.
5. On lightly floured surface, knead lightly about 10 times. Roll or pat dough to 1-inch thickness, using as little flour as possible. Cut straight down into dough with a 2½-inch biscuit cutter, being careful not to twist cutter.
6. Place 1 inch apart on ungreased cookie sheet. Bake 12 to 15 minutes.

Nutrition Information

White or Whole Wheat Yeast Bread Dough

(makes about 3 $\frac{3}{4}$ pounds dough)

Ingredients

1 package or 2 $\frac{1}{4}$ teaspoons active dry yeast
½ cup lukewarm water (110°F-115°F)
½ teaspoon granulated sugar
½ cup vegetable shortening or butter
½ cup granulated sugar
1 large egg, beaten
1½ teaspoons salt
2 cups milk, scalded and cooled to lukewarm
7½ to 7¾ cups all-purpose flour or bread flour OR 4 cups whole wheat flour plus ¾ to ¾ cups all-purpose or bread flour

Directions

In small bowl, dissolve yeast in lukewarm water, stirring in ½ teaspoon sugar. Let stand 5 minutes.

In mixer bowl, beat shortening with ½ cup sugar; add egg, salt, cooled milk, and dissolved yeast.

Stir in flour a little at a time until dough is stiff enough to knead. Knead by hand or with dough hook 8 minutes or until smooth and elastic. Place in greased bowl; cover and let rise until doubled.

Punch down dough and divide into 3 equal balls. Flatten each ball with hands or rolling pin into a rectangle about 8 inches by 4 inches on a lightly floured surface. Roll dough up tightly, beginning at the 8-inch side, to form a loaf. Press with thumbs to seal after each turn. Pinch edge of dough into roll to seal. Press each end with side of hand to seal. Fold ends under the loaf.

Place seam side down in the pan. Brush loaves lightly with butter. Cover and let rise in warm place for 35 to 50 minutes or until double in size.

Move oven racks to a lower position so that tops of pans will be in the center of the oven. Heat oven to 375° and bake for 35 to 40 minutes or until loaves are deep golden brown and sound hollow when tapped. A thermometer can be used to check for doneness. The thermometer should read about 200°.

Remove loaves from pans to a wire rack. Brush loaves with butter and cool.

Note: Dough may be kept covered in refrigerator for several days and used when needed.

Recipe used with permission of the Kansas Wheat Commission.
